Calls on FCC to Support Rural Broadband

Washington, D.C. – Congressman Dave Loebsack released the following statement regarding the announcement that President Obama will make broadband construction along Federal roadways cheaper and more efficient.

“The future of rural development in Iowa and across the country depends, in large part, on the access to internet and specifically broadband. I have met with many small businesses, farmers, and rural telecommunication companies who have told me the importance of expanding high speed internet access to rural areas. This is critical to rural economic development, job growth, businesses, farmers, and families.

“While I applaud today’s announcement, I also call on the Federal Communications Commission to commit to expanding broadband for all Iowans by supporting broadband growth in rural communities so that this critical economic development tool is available for all Iowans, regardless of where they live.”

Specifically, the announcement will ensure that agencies charged with managing Federal properties and roads take specific steps to adopt a uniform approach for allowing broadband carriers to build networks on and through those assets and speed the delivery of connectivity to communities, businesses, and schools.
